Maher Kabir

424-522-4699 | maherkabir@berkeley.edu | linkedin.com/in/maherkabir

Education

University of California, Berkeley — Berkeley, CA
Bachelor of Arts in Computer Science — *August 2022 – May 2026*

- 3.8 GPA
- Coursework: Program Design, Data Structures, Computer Architecture, Data Visualization, Inference and Modeling, Discrete Math, Probability, Linear Algebra, Operating Systems, Artificial Intelligence, Internet Architecture, Advanced Algorithms

Experience

Software Engineer — July 2026 – Present
Uber — *San Francisco Bay Area, CA (Hybrid)*

- Full-time on the Apache Cassandra infrastructure team managing hundreds of clusters supporting Uber's global products with 99.99% uptime guarantees
- Building high-performance backend systems and internal tooling in Java to optimize cluster monitoring, diagnostics, and operational efficiency

Software Engineer Intern — September 2025 – November 2025
Uber — *Sunnyvale, CA*

- Contributed to the Apache Cassandra infrastructure team managing hundreds of clusters supporting Uber's global products with 99.99% uptime guarantees
- Engineered a metrics filtering algorithm projected to reduce metrics storage costs by 20–30% across large-scale production environments
- Implemented high-performance backend systems and internal tooling in Java to optimize cluster monitoring, diagnostics, and operational efficiency

Software Development Intern — June 2025 – August 2025
Amazon Web Services (AWS) — *Bellevue, WA*

- Designed and implemented an internal Model Context Protocol (MCP) server in Java to streamline development and deployment of new codebase authoring processes across multiple teams, automating workflows for AI agents
- Developed TypeScript processes to automate standard workflows within AWS data centers, supporting a unit testing framework for code-based process authoring and enabling more reliable work allocation
- Automated environment setup and reduced manual steps for engineers, accelerating prototyping and onboarding across development teams

Software Engineer Intern — June 2024 – August 2024
Westlake Financial — *Los Angeles, CA*

- Architected and implemented a robust framework to facilitate the seamless transition from an older MySQL database to a new AlloyDB Google Cloud database based in PostgreSQL
- Conducted thorough analysis and optimization of migration processes, identifying and mitigating potential bottlenecks and risks, enabling a 150% performance improvement
- Created and integrated a Spring Framework application to efficiently transfer files to the new cloud-based AlloyDB database, enhancing data accessibility and supporting the overall migration strategy

Data Science Researcher — January 2024 – May 2024
EpiNu — *Berkeley, CA*

- Built the image data extraction and cleaning pipeline described under Projects

Projects

Image Data Extraction and Cleaning Project | *Python, Pillow Library, YOLO Model, PyTorch*

- Designed a script that iterates through a database of hundreds of images, taken by participants in the Congo, and extracts the location, date, and dozens of other image parameters
- Exported image data to a .csv file, and attached vital flooding data based on the location of each image, to be used for the weather warning system, as well as nutrition data for the food items in the image
- Cleaned data was then used to train the YOLO computer vision model, improving the accuracy of the model with field data

Technical Skills

Languages: Java, Python, C/C++, SQL, HTML/CSS, JavaScript, Node.js, Lua, TypeScript
Frameworks: Flask, JUnit, Spring Framework, Model Context Protocol
Developer Tools: AWS, Git, Google Cloud Platform, VS Code, Visual Studio, IntelliJ, Eclipse
Libraries: pandas, NumPy, Matplotlib, Pillow, PyTorch
